Deploying Access Server to the organization

Hi Nguyễn,

Welcome to day 3, where we are going to show you how to get new users set up in Access Server using our flexible user authentication system.

You can configure Access Server's authentication to meet the needs of your users with local or external authentication — we integrate with many different systems.

[Walk through our step-by-step authentication tutorial here.](#)

Already using a specific external authentication system? Read through specifics for any of these:

- [PAM](#)
- [LDAP](#)
- [RADIUS](#)
- [SAML](#)

We're here to help, and our support team can assist you in this step or any moving forward. [Submit a support ticket](#) and they'll be in touch fast and get you going!

In the next two days we will cover:

- Tomorrow: Zero Trust Network Access
- Day 5: Cluster Configuration

We're here to help make the world more secure, and that includes your organization.

Best,

The Team at OpenVPN
